Department of Epidemiology and Biostatistics
Group Assignment on Biostatistics course For 2nd Year Applied
Nutrition students
Submission date 30/12/2016 E.C
Mark 15-20%

Rules: Copy of the others group work leads to “0” mark for both group

1. Distinguish between the four measurement scales
2. Explain the different methods of primary data collection Methods
3. Describe the uses, applications and limitation of statistics/ biostatistics
4. List the advantage and dis-advantage of using secondary and primary data
5. Construct grouped frequency distributions which contain class limit, class boundary, frequency, class mark and less than cumulative frequency with the necessary steps for the following datasets

23	64	43	33	29	28	47	57
12	85	44	55	66	48	58	69
25	67	69	47	63	62	54	60

6. Assume a researcher is interested to know the nutritional status of children in a certain community. Forty two sample children were selected at random and their nutritional status were measured and classified as (low, normal, high) as given in the table below. Then,
 - A. Construct the appropriate frequency distribution explain the important points
 - B. Describe the data using bar-chart and pie-chart and explain the main points

normal	High	Low	normal	normal	normal	High
Low	Low	High	Low	Low	Low	Low
High	High	Low	High	Low	Low	normal
High	Low	Normal	Normal	Low	Low	High
High	High	Low	High	High	High	Low
Low	Low	Low	normal	High	normal	High
