

Introduction to Community-Based Training Program (CBTP) Community based training program (CBTP)

It is one of the community based education program that aimed at enabling the students to assess, diagnose and intervene prioritized community health problems depending on the level of competence

Programme objectives

At the of the programme are expected to

- ✓ Define demographic socio-economic , political and environmental aspects of a given community (determinants of socio- economic status)
- ✓ Make community diagnosis and draw an action plan which would enable students to suggest appropriate intervention measures
- ✓ Organize intervention utilizing the concept components and strategies of community participation and multi -sect oral approach
- ✓ Plan and conduct problem -oriented research
- ✓ **Strategies of CBE**

In order to implement community based education (CBE), the college uses the following three strategies:

1. Community Based Training Program (CBTP)
2. Team Training Program (TTP)
3. Student Research Program (SRP)

TEAM TRAINING PROGRAMME (TTP)

Each team aims consists of 10-14 students in the nearby Training Health centers

Objectives of TTP

- Learn tools how to identify and prioritize health problems, draw action plan and implement interventions and evaluate the program
- Provide health education and health services in the health centers and surrounding communities
- Develop the communication skill through interactive learning among team members, resident supervisors, supervisors and community
- Develop team spirit and create a solid foundation for their future work in a team
- Enrich sense of belongingness and develop positive attitude of graduates to work in a community where there is poor infrastructure

Activities in the TTP

1. Poly clinic and MCH

History taking

- | | |
|--------------|----------------------------|
| ✓ P/E | ✓ Laboratory investigation |
| ✓ V/sign | ✓ Drug prescribing |
| ✓ Impression | ✓ Counselling |

2. Community service and community diagnosis

Services going to be provided

- | | |
|----------------------------------|---------------------------------------|
| ✓ Home health service | ✓ Seminar presentation |
| ✓ School health service | ✓ Water source inspection and service |
| ✓ Prison health service | ✓ Hotel and restaurant health service |
| ✓ Occupational health service | ✓ Outreach service |
| ✓ Health education | ✓ Carry out minor project |
| ✓ Health institution supervision | |

3. While you are providing the above service you have prioritize the problem using prioritizing criteria

- | | |
|-----------------------------|-----------------------|
| 1. Magnitude of the problem | 4. Government concern |
| 2. Severity of the problem | 5. Community concern |
| 3. Feasibility | |

4. After identifying the problem using the above criteria you are expected to prepare action plan

- | | |
|-----------------------|---------------------|
| 1. Identified problem | 3. Responsible body |
| 2. Proposed solution | 4. Time bound |

5. Perform the activity according to the problem identified

6. Prepare report of the project /research project

While you are preparing your report use the standard templet

7. Submit the project work

8. Present the project work

Within the SRP, all under graduate program students are required to undertake independent institutional/community based research work. During this program the student (s) and the research advisors of students will work hand in hand to finalize student research activities. This enables the students to become skilled researchers. While doing their research they will gain knowledge on problem identification, data collection, data analysis, interpretation, recommending solutions and implementing them. The study has to be problem-oriented, community-based/institution-based, scientifically and ethically sound and feasible and action oriented.

Community-Based Education, in general, has enabled the university:

To train professionals in diverse fields of studies in a community setting in such a way that the students will be responsive to the needs of the community, mainly:

- To encourage a team approach in treating societal problems,
- To work with the local communities with greater conviction,
- To undertake problem-based research activities which take into consideration the priority needs of the community and enhance research undertaking skill.

. Student Research Project (SRP) The SRP is a requirement for students graduating from JU. The program creates a foundation to enhance analytical thinking, undertaking research, documentation and presentation of the research output. The research problems are picked from CBTP exercise and the problems picked are converted into research projects to generate information and knowledge. SRP involves a series of activities such as:

- Problem identification, topic selection and proposal development
- Instrument development and data collection,
- Data analyses and interpretation of the results
- Recommend possible solutions for intervention
- Documentation and presentations of the research output

1. The rationale of the program

Objectives of the program

At the end of the course students are expected to accomplish the following objectives:

3.1. General objective

- Do community diagnosis and design intervention measures to solve community health and health related problems.

3.2. Specific Instructional Objectives

- Determine the demographic characteristics of a defined community
- Do numbering , mapping and zoning for specific attachment site
- Define in general terms the geographical, political, socio economic and cultural characteristics of the given community.
- Describe the activities and functional organization of the community.
- Determine the demographic characteristics of a defined community and do mapping and zoning.
- Determine community resources and their distribution.
- Use appropriate sampling techniques: simple random sampling, stratified sampling and systematic sampling.
- Collect, analyze and interpret health and health related data. • Use communication skills to effect necessary health related behavioral changes and to solve community health problems.
- Use appropriate techniques to assess health status of a community: health interview survey, health record survey, nutritional survey such as anthropometric measurement, simple laboratory tests and immunological surveys-scars and skin tests.
- Determine the sanitary level of a given community: waste disposal, water supply system, housing condition, and food sanitation and vector control.
- Identify, prioritize, plan, organize and implement intervention measures for some of the common health problem in the community
- Develop an action plan based on prioritized prevailing health challenges

10. 9 • Intervene prioritized community health and health related challenges using available resource through stake holder involvement

- Do monitoring and evaluation the intervention activities
- Linking to the right stakeholders to ensure sustainability

Time frame for CBTP Student will attach to the community site according the curricula of a given program, but the student should be posted after the completion of necessary major Public Health Course (Mandatory –Epidemiology and Biostatistics and other related courses) and professional course. It should be conducted at the end of the second semester of a given academic year and with a minimum of six week duration attachment. Activities in CBTP: During CBTP the student is considered as independent health professionals. So they will take the responsibility to plan, intervene and monitor and evaluate community health problems. They will perform the following activities, but they are not limited to these activities. They can do activities which are relevant to their specific situation of their attachment

areas. 5.1. Preparation phase The major activities in this phase are giving training or orientation for instructors and students and logistic activities. a. Training and orientation Training for new/un trained staffs Training shall be given to all new employed instructors. The objective of this inductive training helps students and new staff members to introduce to CBTP program, models and theories applied in CBTP, to familiarize the CBTP and CBE working guidelines. In addition the training may contribute and ignite an interest to work together as members of a team, and necessary to formulate and solve community development challenges. Through active CBE service within the community,

2. 11. 10 it is expected that students and academic staffs will increase their awareness of the importance of community involvement and intersectoral collaboration in development. In brief, the common objectives in the induction training should include: Data collection process (data collection tools, techniques, procedures, Numbering, mapping and zoning); data entry and analysis (introducing statistical software's); community diagnosis (situation analysis); health planning; implementation and evaluation of activities through community involvement, collaboration with different stakeholders and team approach. Orientation of supervisors and students on TTP In CBTP before departing to the particular community a one day orientation will be given to students and supervisors. The orientation include about the philosophy of CBE in general, CBTP objective and activity in particular. In addition, students and supervisors will be oriented about their roles and responsibilities, the time required to complete the program. Then the CBE office with respective department heads organize the students into manageable groups taking into account the academic ability, knowledge of the local language and culture. Each group shall democratically select one team leader, one reporter and three logistics. Team formation and Composition The team shall composed of maximum of 25 students in each group shall contain proportional size of female students in the department. CBE office shall randomly assign students to form groups. unless special reason has been presented to CBE office and decided, the students shall be not allowed to transfer from one team or site to another. b. Logistics arrangements Student's meal issues: the Student Service Center (SSC) is responsible and accountable to all issues pertaining to students' meal. SSC shall finalize all activities two weeks prior to the beginning of the programs CBTP shall report to the logistics unit of CBE. Only lunch will be served to café students. The role of logistics unit of CBE office here is to make sure that SSC received a schedule on CBE programs from CBE office and shall take reports on students meal issues from SCC.
3. 12. 11 Transport Issues: the Transport and Facility Office is responsible and accountable to all issues pertaining to transport services. The logistic unit of CBE shall plan and communicate transport need to Transport office prior to the beginning of the programs. Site selection: CBE office shall plan, conduct and select sites for CBTP based on community health need and infrastructures availability to the students. Priority shall be given to rural and semi urban areas. Stationary materials: provision of stationary materials is the task of CBE office. The office shall plan, prepare and provide stationary

materials (pen, pencil, Parker, blank papers, A4 paper for mapping, anthropometric materials, note books , lab equipment's and supplies, medical equipment as deem necessary) to students prior to the beginning of the programs The student representatives shall communicate with the CBE office and Student Crevice center take and handle all logistic issues. 5.2. CBTP 6 weeks activities 5.2.1. The 1st week CBTP activity I. Ethical procedures The CBTP group shall take permission requesting letter to CBTP attachment site administrative bodies written from CBE office. They have to explain in detail about the objective, activities, duration, required support for CBTP program and should get permission first before any activities. II. Mapping A map is a simplified, selective, symbolized, diminished and a plane representation of a part or the whole of the specific geographic area on a piece of paper. A map provides a bird's eye view of the earth's surface or a part of it. The mapmaker is always selective and should limit the amount of information to be shown on the map. Otherwise, the map becomes difficult to read or it would be overcrowded and confusing. This shows that in any map, the information is summarized or simplified by avoiding unnecessary details.

4. 13. 12 The group have to draw maps of the study area based on international agreed standards and methods III. Numbering Each housing unit within the mapped locality should be identified by its house number. Hence a number must physically be put on each house, or housing unit. The number should be put / marked on a site easily visible for example, on the door, window, etc. If there are separate households in housing unit or compound different numbers should be given to each household. House numbers could be marked on houses using different ways: Tagged metals ; Number written on pieces of metal sheets ; Paints on doors, windows, on frames or walls ; markers and chinks. Nevertheless, it is important that the number marks are permanent or long lasting. The step of numbering houses should be in such a way that it will lead from one household or group of households to the next with minimized walking. For a systematic organization the assignment of numbers to houses should be planned after the sketch map is completed (in the office after the field work is over). This helps to plan blocks, zones or clusters of houses for ease of tracing and minimizing of confusion in the sequential location or follow ups of the numbers when need arises. IV. Zoning Zoning is the division of land, town, kebele or a community in to different districts or “ketenas” with particular characteristics. The purpose Zoning helps to: Have easy access to the target population, to have understanding of distribution of population by location from a given reference E.g. Distance from a health institution, school, water source, river line, a waste dump, a swampy area, etc. and for ease of service delivery, staff deployment (assignment), monitoring, comparison of achievement, etc. Points to be considered during zoning of a locality are natural features such as rivers, mountains, depressions and manmade features such as, roads, footpaths, fences, blocks etc. Steps in Zoning 1. Decide on the number of zones required/ needed based on the intended purpose.

5. **14. 13** 2. Survey: tour the area or specific locality to be zoned. 3. Identify permanent features; like natural or man-made features. 4. Identify these features on the locality sketch map. 5. Divide the locality in to zones (ketenas) using the identified features. 6. Mark the zone boundaries on the locality sketch map. If applicable indicate the zone marks on the individual homes with the house numbers. N.B. It could be planned using the sketch map to consider clustering of house numbers in sequence to identify a given zone and finally marking these numbers to the houses on the specified zone. V. Data collection Data collection shall be started and completed in first week of CBTP program. Using the maps , zoning and numbering developed priory the data shall be collected according to scientific merits. Verbal informed consent shall be taken from each participants. Confidentiality must be maintained. The participants shall be mother or father or head of the house hold. The sample size, sampling technique, sampling procedures, data handling, supervision and data storage shall be based on scientifically explainable reasons and standards. 2nd and 3rd week activity I. Training on statistics The assigned supervisors shall give training on statistical software's, methods of data entry, data analysis. II. Data entry All collected data shall be entered to software with active involvement of all group members. III. Data analysis The entered data shall be analyzed using appropriate methods
6. **15. 14** IV. Action plan write up Identify the main health challenges in the community. Prioritize them using prioritization criterion. Develop an action plan for each priority health challenges. Students shall produce an organized action plan document based on the CBE guiding format and power points for action plan presentation seminar day. Make sure that the community is getting involved in your action plan developments. You have to scan and analyses potential stakeholders in the locality and beyond. V. Action plan presentation and incorporating comments Action plan shall be presented to senior supervisors and feedbacks and comments shall be incorporated in the document. 4th -6th week activities Intervention based on the plan. At the end of 6th week time Evaluation of interventions, submitting final word documents, map, pictures and other relevant documents to CBE office. Use appropriate indicators
6. **THE ROLE AND RESPONSIBILITIES CBE OFFICE, STUDENT SERVICE CENTER AND TRANSPORT OFFICE** 6.1. The role of CBE office The office is the central actor in CBTP programs. It's mandated to plan, implement, monitor and evaluate CBTP programs. The role and responsibilities are listed as follow, selecting appropriate sites, forming groups , assigning the students , preparing and publish schedule, assign supervisors, giving orientation and training for students and instructors, assign and monitoring student representatives, supervisors, provide stationary materials, evaluate and document students grade.
7. **16. 15** 6.2. Student Service Center and Transport office Meal and related issues are handled by student service center. The student service center should provide the student lunch on the time. The transport service office and facility office shall facilitate and provide transport services and all related issues. 6.3. The CBTP sites coordinator from CBE office CBE office shall assign one site coordinator for each team

from its office members and will have the following roles and responsibilities. 6.3.1. Roles and responsibilities of CBTP site coordinator - The site coordinator assigned by CBE coordinator for that specific attachment time - Directly accountable to the CBE coordinator - Plans, directs, coordinates and monitors overall activities of the CBTP team - Confirms fieldwork is started on time as scheduled and facilitates the work of the team - Schedules supervision date and time for supervisory team members - Conduct regular supervisory team member's meeting to discuss student performance - Compiles reports submitted by each supervisory, student's group leader and submits to the CBE coordinating office - Makes sure that students receive proper supervision, guidance and consultation from members of the supervisory team - Performs all other tasks assigned by the CBE coordinator for the assigned team 6.4.

The role of assigned supervisors 6.4.1. The role of supervisors in CBTP - Supervision is the responsibility of all supervisors assigned to the training sites and other stakeholders in the training. Each assigned supervisor will be stationed in his/her assignment area for a minimum of one week. The supervisors supervise and guide the students while performing their activities.

8. 17. 16 The main responsibilities are summarized as follow.
 - He/she shall provide support and guidance to students in the training program
 - He/she ensures greatest conducive learning atmosphere to students at the training program
 - Makes sure that students conduct discussion sessions according to the program scheduled.
 - He/she has to take student attendance every morning and recap daily activities at every evening.
 - He/she has to visit students at their actual working environment (outreach, static...etc)
 - He/she should submit report on evaluation of students and program for the CBE office at most two day later of his/her return from site.
- 6.5. The role and responsibilities of each student in CBTP programs All students:
 - Should be disciplined enough while evolved in CBE activities
 - Be punctual for the day to day activity
 - Should discharge individual and group tasks assigned to him/her
 - Should actively participate in group meetings
 - Should participate in implementation and evaluation activities
 - Should participate in all TTP activities and report writing
 - Should do all other tasks assigned to him/her by the group team leader and assigned supervisors
 - Should learn and act according to enhance social and cultural skills
 - Should be willing to learn cooperatively/collaboratively with peers
 - Should strengthen university-community linkage
 - should be willing to learn from the community;
9. 18. 17 6.6. The role and responsibilities of students representatives 6.6.1. Job descriptions of student team leader The Student team leader is selected by the students and will have the following job description:
 - She/he is directly responsible to supervisory team leader
 - Organize, lead and play a role model to other students
 - Take attendances in every day activity
 - Assign specific and individual tasks to members
 - Leads team student members meetings
 - Participate in evaluation of the students
 - Makes sure all necessary materials to be used in the program is available before hand
 - Participate in all CBE activities and produce reports
- 6.6.2. Job descriptions of student team reporter The reporter of the student

team is selected by the students democratically and will have the following job descriptions: – He/ she is directly responsible to students team leader – Organize the students in the write-up process of the team report. – Compiles findings and job accomplished by the team in the presentation. – Assist the student team leader in leading and organizing activities – Represent the student team leader during his absence. – Present the findings of the study during CBTP presentation 6.6.3. Job descriptions of student team logistics One student team will have two or three logistic personnel. The students elect these personnel democratically.
