

1. What is the longest nerve in the human body?

- A) Median nerve
- B) Ulnar nerve
- C) Sciatic nerve
- D) Radial nerve

2. Which substance is primarily responsible for the acid-base balance in the blood?

- A) Oxygen
- B) Carbon Dioxide
- C) Nitrogen
- D) Hydrogen

3. Which part of the nervous system controls voluntary movements?

- A) Autonomic nervous system
- B) Somatic nervous system
- C) Central nervous system
- D) Enteric nervous system

4. The lymphatic system is also known as the:

- A) Primary circulatory system
- B) Secondary circulatory system
- C) Tertiary circulatory system
- D) None of the above

5. The function of the lymphatic system that is NOT related to the immune response is:

- A) Fluid balance
- B) Fat absorption
- C) Pathogen detection
- D) Lymph node filtration

6. The type of cancer that originates in the lymphatic system is called:

- A) Lymphoma

B) Leukemia

C) Sarcoma

D) Carcinoma

7. The condition characterized by the accumulation of fat tissue, typically in the legs, hips, and buttocks, is called:

A) Lymphedema

B) Lipedema

C) Elephantiasis

D) Lymphadenopathy

8. The largest lymphatic vessel that empties lymph fluid into the left subclavian vein is the:

A) Thoracic duct

B) Lymphatic duct

C) Jugular lymphatic duct

D) Axillary lymphatic duct

9. The disease caused by the infection of filarial worms, leading to the thickening of the skin and the enlargement of body parts, is called:

A) Lymphedema

B) Lipedema

C) Lymphadenopathy

D) Elephantiasis

10. The tiny, thin-walled air sacs located at the end of the bronchioles where gas exchange occurs are called:

A. Bronchi

B. Alveoli

C. Capillaries

D. Pleural membranes

11. The dome-shaped muscle at the base of the thoracic cavity that plays a crucial role in the mechanics of breathing is the:

A. Larynx

B. Bronchioles

C. Diaphragm

D. Pleural membranes

12. The function of the nose and nasal cavity include:

A. Air filtration

B. Air humidification

C. Air warming

D. All of the above

13. The structure that contains the vocal cords responsible for voice production is the:

A. Pharynx

B. Larynx

C. Trachea

D. Bronchi

14. The primary airways that branch off from the trachea and carry air into and out of the lungs are called:

A. Bronchioles

B. Alveoli

C. Bronchi

D. Pleural membranes

15. The smallest airways within the respiratory system that branch off from the bronchi and lead directly to the alveoli are called:

A. Trachea

B. Bronchi

C. Bronchioles

D. Alveoli

16. What is the primary function of the parathyroid hormone (PTH)?

A) Regulates calcium levels in the blood

B) Stimulates the release of thyroid hormones

C) Promotes the production of insulin

D) Regulates the sleep-wake cycle

17. The pineal gland is responsible for the production of which hormone?

- A) Cortisol
- B) Melatonin**
- C) Insulin
- D) Oxytocin

18. Which of the following is not considered an endocrine gland?

- A) Pituitary gland
- B) Thyroid gland
- C) Adrenal gland
- d) Pancreas**

19. Which hormone produced by the anterior pituitary gland is responsible for growth and development?

- A) ACTH
- B) TSH
- C) FSH
- D) Growth Hormone**

20. Which hormone secreted by the posterior pituitary gland helps regulate water balance in the body?

- A) Oxytocin
- B) Antidiuretic Hormone (ADH)**
- C) Luteinizing Hormone (LH)
- D) Follicle-stimulating hormone (FSH)

21. What is the primary function of the endocrine system?

- A) To produce and secrete hormones
- B) To regulate metabolism
- C) To control growth and development
- D) All of the above**

1. Why is the adrenal stress response important for the body's adaptation to stress?
2. How do the hormones produced by the pancreas work together to regulate blood glucose levels?
3. Why is the regulation of pH, water, and electrolyte balance an important function of the urinary system?
4. Why are the alveoli considered the sites of gas exchange?
5. How does the lymphatic system transport lymph fluid without a central pump?
6. How does the body respond to high altitudes in terms of respiratory adaptations?

1. The lymphatic system is responsible for _____ and _____ (immune response, fluid balance)
2. Lymph nodes filter lymph fluid and trap any _____ substances, allowing the body's _____ to destroy them. (harmful, WBCs)
3. Lymphatic vessels in the small intestine absorb _____ and _____ and transport them to the bloodstream. (fats, lipids)
4. The _____ is the largest lymphatic vessel that empties lymph fluid into the left subclavian vein. (thoracic duct)
5. The _____ are the primary airways that branch off from the trachea and carry air into and out of the lungs. (Bronchi)
6. The _____ are the smallest airways within the respiratory system, branching off from the bronchi and leading directly to the alveoli. (Bronchioles)
7. The _____ are the tiny, thin-walled air sacs located at the end of the bronchioles where gas exchange occurs. (Alveoli)
8. The _____ is a dome-shaped muscle located at the base of the thoracic cavity that plays a crucial role in the mechanics of breathing. (Diaphragm)
9. The _____ gland is often referred to as the "master gland" and is located at the base of the brain. Pituitary
10. The _____ gland produces the hormones thyroxine (T4) and triiodothyronine (T3), which regulate metabolism, growth, and development. Thyroid
11. The _____ gland produces the hormones cortisol and aldosterone, which are involved in the body's stress response and fluid/electrolyte balance, respectively. Adrenal
12. The _____ gland produces the hormones insulin and glucagon, which regulate blood glucose levels. Pancreas
13. The _____ hormone, produced by the posterior pituitary gland, plays a crucial role in childbirth and lactation. Oxytocin
14. The _____ hormone, produced by the posterior pituitary gland, helps regulate water balance and blood pressure. Antidiuretic Hormone (ADH)
15. The _____ gland, located in the neck, produces parathyroid hormone (PTH), which regulates calcium levels in the blood. Parathyroid
16. In females, the urethra is _____ than in males and emerges above the _____ opening. shorter, vaginal
